Programme Title: MSc Part-time Sound and Music Computing

Programme Specification (PG)

Awarding body / institution: Queen Mary University of London
Teaching institution: Queen Mary University of London
Name of final award and programme title: MSc Part-time Sound and Music Computing
Name of interim award(s): PG Certificate and PG Diploma
Duration of study / period of registration: 24 Months
Queen Mary programme code(s): H6T4
QAA Benchmark Group: Computing
FHEQ Level of Award: Level 7
Programme accredited by: 
Date Programme Specification approved: 
Responsible School / Institute: School of Electronic Engineering & Computer Science

Schools / Institutes which will also be involved in teaching part of the programme: NA

Collaborative institution(s) / organisation(s) involved in delivering the programme: NA

Programme outline

This MSc provides interdisciplinary training in sound and music computing. The course offers specialist modules and projects in a wide range of areas including music signal processing, music analysis and synthesis, sound recording and engineering, music perception and cognition, expressive musical performance and digital musical instruments, interfaces & effects. Optional modules include machine learning, interactive system design, social networks, information retrieval, and the semantic web. You will graduate with an deep understanding of today’s leading edge music technologies, with the potential to become a pioneer in developing future generations of technologies.

Aims of the programme

The overall aims are to provide engineering students with training in advanced music and audio technologies, and in particular to give them the background and skills they need for careers in the technical aspects of audio production, audio engineering, and broadcasting, music information and information retrieval and other areas of sound and music computing.

Specific aims include the completion of a broad range of advanced study in methods of processing, analysis, synthesis and
manipulation of musical signals. This involves the use of both established and specialised data analysis and signal processing techniques, an understanding of acoustics, music perception and cognition, and basic music theory, and of standards, formats, broadcasting and transmission methods, and multimedia systems.

What will you be expected to achieve?

Discipline-specific skills
- An understanding of the fundamentals of digital signal processing and of the techniques needed for real-time digital signal processing
- An ability to use modern digital techniques for the analysis of speech, music, video, and image transmission and processing
- An appreciation of the techniques underlying the use and transmission of multimedia images, voice, and data
- An understanding of the general signal processing techniques appropriate to the processing of musical signals such as automatic music transcription, computational auditory scene analysis, and music information retrieval.
- An understanding of automatic music transcription, computational auditory scene analysis, and music information retrieval.
- A demonstration of the use of taught knowledge via the successful completion of a project in digital music processing or a cognate subject.
- An understanding of the human processing of sound and music, including the perception and cognition of musical sounds
- Knowledge of the algorithms for pattern recognition in audio and symbolic representations of music.
- Knowledge of the relative merits of the various modern approaches to signal processing of audio and music.
- An understanding of the statistical properties of speech and music.
- The ability to implement statistical approaches to the modeling and filtering of musical signal analysis.
- A general and theoretical understanding of musical signal analysis using the full range of statistical, intelligent and/or real-time processing methods.
- An understanding of how audio is streamed, transmitted, or broadcast.
- An understanding of the role of audio and music in the context of a multimedia system.
- An understanding of how music processing fits into the greater scheme of multimedia processing.
- Knowledge of the standards bodies and standards used for audio and music.
- Knowledge of the copyright issues involved with music and its distribution.
- An understanding of the issues related to the use of audio in a video broadcasting system, including satellite, terrestrial, and cable broadcasting.

Academic Content:

| A 1 | An ability to use modern digital techniques for the analysis of speech, music, video transmission and processing. |
| A 2 | An understanding of automatic music transcription, computational auditory scene analysis, and music information retrieval and other aspects of sound and music processing by humans and machines. |
| A 3 | The ability to implement statistical and rule-based approaches to musical analysis and synthesis. |
| A 4 | A general and theoretical understanding of musical analysis using the full range of statistical, intelligent and/or real-time processing methods |
| A 5 | An understanding of the human perception of music and ability to apply this understanding in empirical experiments and computational models. |

Disciplinary Skills - able to:
Programme Title: MSc Part-time Sound and Music Computing

| B1 | Work independently on a practical or research-based project under supervision |
| B2 | Source, navigate, select, retrieve, evaluate, manipulate and manage information from a variety of sources |
| B3 | Carry out extended critical and analytic writing through a dissertation on their research project. |
| B4 | Take a practical approach to designing empirical experiments for testing hypotheses, including selection of appropriate methods, stimuli, participants, and methods for analysis. |

Attributes:

| C1 | Work independently on a practical or research-based project under supervision |
| C2 | Analyse complex, novel and diverse situations, and identify appropriate methods of working and communicating |
| C3 | Able to engage confidently with others in identifying and communicating problems, identifying goals and solutions and work with others and individually towards achieving them. |

How will you learn?

Each non-project-based module normally involves lectures, problem solving coursework and practical sessions. Lectures are used to introduce principles and methods and also to illustrate how they can be applied in practice. Coursework allows students to develop their skills in problem solving and to gain practical experience. Practical sessions provide students with guidance and help while solving a problem. These lessons take the form of exercise classes and programming laboratories that allow the students to learn-by-doing in order to complement the lectures.

Individual projects are undertaken during the summer months under the supervision of an academic member of staff with whom there are normally weekly consultancy meetings. These are used for students to report on their progress, discuss research and design issues and plan their future work. This develops and reinforces students' ability to communicate technical ideas clearly and effectively. The Projects Coordinator also runs a thread of taught sessions to support the project module. A number of industrial-linked projects may be offered each year, which students can apply for.

How will you be assessed?

The assessment of taught courses takes place through a written examination and coursework. The project is examined on the basis of a written report, a formal oral presentation, and a demonstration of the piece of software developed by the student.

How is the programme structured?

Please specify the structure of the programme diets for all variants of the programme (e.g. full-time, part-time - if applicable). The description should be sufficiently detailed to fully define the structure of the diet.

Year 1
Programme Title: MSc Part-time Sound and Music Computing

Semester 1:
ECS741P Music Perception and Cognition (core)
ECS707P Fundamentals of DSP (required if equivalent background is missing)

If a student have sufficient background in DSP and therefore don’t need to take ECS707P, they could take:
One of:
ECS749P Sound Recording and Production Techniques
or
ECS742P Interactive Digital Multimedia Techniques

Semester 2:
At least one from:
ECS7006P Music Informatics
ECS7012P Music and Audio Programming
Plus further options from:
ECS733P Interactive System Design
ECS735P The Semantic Web

Year 2:
Semester 1:
Select one of:
ECS749P Sound Recording and Production Techniques
or
ECS742P Interactive Digital Multimedia Techniques
(If they didn’t take either of these in year 1.)
Then depending on whether students take one of the two modules above in year 2, they can take one or two from
ECS708P Machine Learning (highly recommended)
ECS765P Big Data Processing

Semester 2:
Any 2 from:
ECS7006P Music Informatics
ECS7012P Music and Audio Programming
ECS7013P Deep Learning for Audio and Music
ECS7022P Computational Creativity
ECS733P Interactive System Design
ECS735P The Semantic Web

Semester 3
(must take and pass)
ECS750P Project

Academic Year of Study FT - Year 1

### What are the entry requirements?

Further Details on the entry requirements can be found at [http://eecs.qmul.ac.uk/postgraduates/entry-requirements/](http://eecs.qmul.ac.uk/postgraduates/entry-requirements/)

### How will the quality of the programme be managed and enhanced? How do we listen to and act on your feedback?

The Student-Staff Liaison Committee provides a formal means of communication and discussion between the School and its students. The committee consists of student representatives from each cohort, together with appropriate representation from School staff. It is designed to respond to the needs of students, as well as act as a forum for discussing programme and module developments. Student-Staff Liaison Committees meet four times a year, twice in each teaching semester.

Each semester, students are invited to complete a web-based module questionnaire for each of their taught modules, and the results are fed back through the SSLC meetings. The results are also made available on the student intranet, as are the minutes of the SSLC meetings. Any actions necessary are taken forward by the relevant Senior Tutor, who chairs the SSLC, and general issues are discussed and actioned through the School’s Student Experience Learning Teaching And Assessment (SETLA) Committee. The School’s SETLA Committee advises the Director of Taught Programmes on all matters relating to the delivery of taught
Programme Title: MSc Part-time Sound and Music Computing

Programmes at school level including monitoring the application of relevant QM policies and reviewing all proposals for module and programme approval and amendment before submission to Taught Programmes Board. Student views are incorporated in this Committee’s work in a number of ways, including through student membership and consideration of student surveys and module questionnaires.

The School participates in the College’s Annual Programme Review process, which supports strategic planning and operational issues for all undergraduate and taught postgraduate programmes. The APR includes consideration of the School’s Taught Programmes Action Plan, which records progress on learning and teaching related actions on a rolling basis. Students’ views are considered in the APR process through analysis of the NSS and module questionnaires, among other data.

What academic support is available?

All students are assigned an academic advisor during induction week. The advisor role is to counsel students on their academic development including modules selection. The School has one Senior Tutor for Postgraduate students who responsible for the pastoral care of students.

Programme-specific rules and facts

The programme adheres to the standard Academic Regulations for taught postgraduate programmes, with a special regulation for a progression point after the taught component.

How inclusive is the programme for all students, including those with disabilities?

Queen Mary has a central Disability and Dyslexia Service (DDS) that offers support for all students with disabilities, specific learning difficulties and mental health issues. The DDS supports all Queen Mary students: full-time, part-time, undergraduate, postgraduate, UK and international at all campuses and all sites.

Students can access advice, guidance and support in the following areas:
• Finding out if you have a specific learning difficulty like dyslexia
• Applying for funding through the Disabled Students’ Allowance (DSA)
• Arranging DSA assessments of need
• Special arrangements in examinations
• Accessing loaned equipment (e.g. digital recorders)
• Specialist one-to-one “study skills” tuition
• Ensuring access to course materials in alternative formats (e.g. Braille)
• Providing educational support workers (e.g. note-takers, readers, library assistants)
• Mentoring support for students with mental health issues and conditions on the autistic spectrum.

Links with employers, placement opportunities and transferable skills

The School of Electronic Engineering & Computer Science has a wide range of industrial contacts secured through research projects and consultancy, our Industrial Experience programme and our Industry Panel.

The Industry Panel works to ensure that our courses are state of the art and match the changing requirements of this fast moving industry. The Panel includes representatives from a variety of Computer Science oriented companies ranging from SMEs to major blue-chips. These include: Microsoft Research, Royal Bank of Scotland, BT Labs, Oaklodge Consultancy, Intel Research, The Usability Company, Hewlett Packard Labs and Arclight Media Technology Limited.

Recent graduates have found employment as programmers, Systems Analysts, Software Engineers, database developers, IT consultants and web developers with well known multinational companies throughout the UK and Europe, the Americas and Asia. Merrill Lynch, Microsoft, Nokia, Barclays Capital, Logica, JPMorgan and Bear Sterns are among the organizations that have recently employed graduates of EECS programs.
